

Direct-Vent Gas Fireplaces:

Eligible models (May 1, 2012 to December 31, 2012)

Tier 1—\$200 for minimum of Fireplace Efficiency (FE) of 65 to 69 percent with intermittent pilot light ignition

The Canada EnerGuide fireplace efficiency (FE) rating is a more accurate measurement of fireplace efficiency than annual fuel utilization efficiency (AFUE) or steady-state ratings that requires third-party testing.

Types of gas fireplaces

Inserts are installed in an existing fireplace cavity where the gas unit is encapsulated in a metal housing and is vented through the chimney chase.

Zero clearance gas fireplaces are installed when there is no existing masonry chimney, typically during a new home construction or through a remodeling project, and are vented through an exterior wall.

Freestanding resemble a wood-burning stove in which all surfaces of the unit are exposed to the interior of the home and is directly vented to the exterior.
